# GUM HEALTH

3870 3333

[brisbanesmiles.com.au](http://brisbanesmiles.com.au)

The Health of your gums is extremely important. Healthy gums and surrounding bone support provide stable structures for your teeth. Healthy Gums are maintained by thorough home care and regular professional care.

**At Brisbane Smiles we aim to effectively manage and prevent the progression of GUM DISEASE because it is far easier and more cost effective to prevent disease than it is to treat.**

## What is Gum Disease?

'Plaque' is a bacterial film that forms naturally on your tooth surfaces.

'Tartar' is calcified plaque and can only be removed professionally during a clean with your dentist or hygienist.

'Gum disease' is the inflammation and infection of the gums caused from plaque and tartar build-up.

'Bone Loss' and 'Pocketing' occurs as a result of Gum Disease where bone recedes away, forming deep pockets under the gums which become even more difficult to keep clean.

## Signs of Gum Disease

### Early Stages

RED, SWOLLEN, BLEEDING

### Late Stages

RECESSION, LOOSE TEETH, GAPPY TEETH, SENSITIVITY

## Factors that encourage Gum Disease

- Smoking increases the risk of Gum Disease
- Inadequate plaque control including irregular or lack of flossing

## Other Factors that increase the Risk of Gum Disease

- Not having regular cleaning appointments
- Some medical conditions such as Uncontrolled Diabetes
- Gum disease is linked to Cardiovascular Disease

# KEEPING HEALTHY GUMS SHOULD BE YOUR NUMBER ONE MOUTH PRIORITY!

## Treatment – What is involved?

# 1

### Treatment Plan

A Treatment Plan is formed to tackle the causes of your Gum Disease

# 2

### Active Treatment

Active Treatment will then follow as per your Treatment Plan. This will usually involve multiple appointments of deep cleaning at 3 monthly intervals

# 3

### Follow-up Treatment

Follow-up Treatments will ensure the gums heal and can remain free of disease

## Measuring Bone Loss

Depth of gum 'pockets' around your teeth give us an indication on the extent of Gum Disease. Healthy gum pockets range between 0 and 3mm depth. Deeper gum pockets indicate areas of infection that should be treated.

## Assessing Bone Loss

X-rays allow visualisation of the bone levels underneath the gums and examine the level of bone loss.

**OPG X-ray showing healthy bone levels in green and bone loss in red**

## What are the Risks?

'Recession' occurs when the bone levels around a tooth have been damaged. Whilst not always apparent at first due to the gums being swollen, once gums settle into a healthy position, you may appear long-in-the tooth or have gaps ('black triangles') in between your teeth.

'Sensitive Teeth' can occur as a result of gum recession. This is due to the lack of gum covering over the root surfaces of the teeth. Often, a 'Sensitive Tooth' Toothpaste with added fluoride will assist with decreasing sensitivity.

'Poor Response' of gums occurs after cleaning infrequently, but can indicate other underlying inabilities of the body to heal. Further assessment and treatments can be recommended.

# GUM HEALTH ASSESSMENT

## GUM DISEASE

- No Gum Disease
- Mild Gum Disease
- Moderate Gum Disease
- Severe Gum Disease

## BONE LOSS

- Mild Bone Loss (0-30%)
- Moderate Bone Loss (30-60%)
- Severe Bone Loss (>60%)

## YOUR TREATMENT PLAN

Using the information gained from our detailed gum assessment and based on your level of disease we recommend a thorough deep clean with our hygienist.

### Initial Treatment

\_\_\_\_\_ Number of Clean Appointments

*We will use Local Anaesthetic to make areas comfortable if required*

### Followup Cleaning

- 3 monthly
- 4 monthly
- 6 monthly

## YOUR CARE AT HOME

- Electric Toothbrush
- Floss
- Piksters
- Superfloss
- Curasept Mouthwash
