## Choking Emergencies in the Dental Practice

7pm, 28 April 2020 (AEST)

Watch on [adainteract.tv](https://adainteract.tv)

Dental practice involves the use, and generation of, small objects around the patient's airways. An ever-present risk in dental practice is the swallowing or inhalation of a small object associated with dental treatment. What happens next?

Facilitated by Dr Peter Norton and presented by Dr Alan Reid, this webinar will cover the immediate management of this potential emergency as well as the follow-up after the incident, providing dentists with up-to-date best-practice procedures.

This webinar will cover:

- Strategies to prevent choking-swallowing incidents

- High-risk items and materials
- Techniques to recover items that have “disappeared”
- First aid for choking for different age groups in a dental setting
- Follow-up (when to refer to a medico, chest radiography, notifying insurer ...)
- General medical conditions which predispose to an incident or complicate its management.

**Dr Alan Reid** is a Clinical Senior Lecturer in the School of Dentistry, Faculty of Medicine and Health Sciences University of Sydney.
